#### ABSTRACT

This document provides information on student charges at public 4-year colleges and universities in the United States for the academic year 1996-97. A narrative section of the report discusses: what is included in the cost of college, the most recent cost figures for public institutions, average costs for American Association of State Colleges and Institutions (AASCU) and for National Association of State Universities and Land-Grant Colleges (NASULGC), whether state appropriations have kept pace with the cost of education, the economic benefits of higher education, how families meet college costs, the reasons for tuition increases, and what colleges and universities are doing to keep costs down. Five tables provided data that cover student charges for 1995-96 and 1996-97; tuition and fees for resident undergraduate students; and characteristics of full-time undergraduate, graduate, and first-professional students receiving student aid. Six figures illustrate change in average tuition and fees; share of revenue from state appropriations and tuition and fees; state appropriations per full-time equivalent student; median annual income of workers by level of school completed and gender (1994); sources of student aid funds; and changes in the type of student aid awarded. Two appendixes list undergraduate student charges at AASCU and NASULGC institutions. (CH)

American Association of State Colleges and Universities

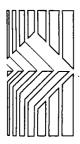

The American Association of State Colleges and Universities (AASCU) is a Washington-based higher education association of more than 400 public colleges and universities and systems across the United States and in Puerto Rico, Guam and the Virgin Islands. The association promotes broad public understanding of the essential role of public higher education in our society, and of the specific responsibilities and contributions of the public colleges and universities which constitute its membership.

The National Association of State Universities and Land-Grant Colleges (NASULGC) is a voluntary, non-profit association of public universities, the nation's land-grant institutions, and many state university systems. In 1997, there were 194 member institutions located in all 50 states, the District of Columbia, and the U.S. territories. The association's overriding mission is to support high-quality public education and serve its member institutions as they perform their traditional teaching, research, and public service roles.

#### COLLEGE COSTS 1996-97

# A Guide To Student Charges at Public, Four-Year Colleges and Universities

### **Executive Summary**

- \* Resident undergraduate students enrolled at public, four-year colleges and universities in fall 1996 faced increases in tuition, fees, room, and board charges that averaged 4-6 percent. These increases were considerably lower than comparable increases five years ago that averaged 12 percent.
- \* Typical tuition and fee charges in fall 1996 for resident undergraduates were as follows:

--Public, four-year colleges and universities: \$2,966 (up 5.5 percent)
--AASCU members: \$2,618 (up 4.5 percent)
--NASULGC members: \$3,108 (up 4.1 percent)

- \* As the proportion of institutional revenues from state appropriations has declined during the past 10-15 years, policymakers have had to rely on tuition and fee revenues to help make up the difference.
- \* It is becoming more difficult for families to meet the rising costs of college. Approximately 1 in 2 undergraduates at public institutions are using some form of student financial assistance. In fall 1996, there was \$50.3 billion in aid available from federal, state, institutional, and private sources.
- \* Among undergraduates who received aid at public, four-year colleges and universities in 1995-96, the most popular types of aid were subsidized Stafford loans (used by 70 percent and averaging \$3,441 per student) and Pell Grants (used by 51 percent and averaging \$1,750 per student).

#### **COLLEGE COSTS 1996-97**

# A Guide To Student Charges at Public, Four-Year Colleges and Universities

#### What is Included in the Cost of College?

- \* Tuition is just part of the cost of attending a college or university. The other costs include fees, room and board, books and supplies, personal and miscellaneous costs, and off-campus expenses.
- \* Fees typically cover student services such as the student union, student organizations, and certain costs related to athletic or recreational facilities.
- \* The student's room and board costs include meal and residence hall expenses or the cost of living off campus.

# What are the Most Recent College Cost Figures for Public, Four-Year Institutions<sup>1</sup>?

#### **Undergraduate Students**

\* Resident undergraduate tuition and fee charges averaged \$2,966 at public, four-year institutions in fall 1996 (see Table 1). This was a 5.5 percent increase (\$155) over the 1995 average of \$2,811.

<sup>&</sup>lt;sup>1</sup> For this report, the American Association of State Colleges and Universities selected a set of institutions that supplied consistent data to The College Board Annual Survey series for 1995-96 and 1996-97. The information may vary slightly from the data released by AASCU or NASULGC last year when a combination of information from The College Board and an AASCU Survey of Student Charges was used.

- \* Nonresident undergraduate tuition and fee charges averaged \$8,253, which was about a 5 percent increase (\$407) above the 1995 figure of \$7,846.
- \* In 1996, average undergraduate room and board charges were \$4,152. This figure was almost 6 percent higher (\$220) than the 1995 comparable figure of \$3,932.
- \* Additional expenses (which include books, supplies, transportation, and personal expenses) also need to be considered when a student budget is estimated. For resident undergraduate students in 1996 the total was \$2,531; the comparable figure for commuters was \$2,975. These estimates for non-instructional costs were 3-4 percent higher (\$69 \$107) than the 1995 totals.

#### Postbaccalaureate Students

- \* Resident tuition and fee charges for students enrolled at the master's level averaged \$3,407 at public, four-year institutions in fall 1996. This was a 5 percent increase (\$165) over the 1995 average of \$3,242. Doctoral students averaged tuition and fee rates of \$4,109 which was a 5 percent increase (\$208) over the 1995 figure of \$3,901.
- \* Among nonresident master's students, the 1996 average tuition and fee charges totaled \$8,527, a 5 percent increase (\$423) over the 1995 figure of \$8,104. Nonresident students enrolled in doctoral programs averaged \$9,962 for tuition and fees; this was about 6 percent higher (\$596) than the 1995 figure of \$9,366.

# What Were the Averages for AASCU Institutions<sup>2</sup>?

#### <u>Undergraduate Students</u>

- \* Resident undergraduate tuition and fee charges averaged \$2,618 at AASCU institutions in fall 1996 (see Table 2). This figure is a 4.5 percent increase (\$113) over the 1995 average of \$2,505. (Institutional data for AASCU members are listed in Appendix A)
- \* 1996 nonresident undergraduate tuition and fee charges averaged \$7,360, which was about a 5 percent increase (\$331) above the 1995 figure of \$7,029.
- \* In 1996, average undergraduate room and board charges were \$3,814. This figure was almost 5 percent higher (\$168) than the 1995 comparable figure of \$3,646.

#### Postbaccalaureate Students

- \* Resident tuition and fee charges for students enrolled at the master's level averaged \$2,917 at AASCU institutions in fall 1996. This was a 5 percent increase (\$135) over the 1995 average of \$2,854. Doctoral students averaged tuition and fees of \$3,177 which was closer to a 3 percent increase (\$135) over the 1995 figure of \$3,074.
- \* Among nonresident master's students, the 1996 average tuition and fee charges were \$7,526, almost a 4 percent increase (\$310) over the 1995 figure of \$7,216. Nonresident students enrolled in doctoral programs averaged \$7,589 for tuition and fees; this was 2 percent higher (\$179) than the 1995 figure of \$7,410.

<sup>&</sup>lt;sup>2</sup>See footnote 1

## What Were the Averages for NASULGC Institutions<sup>3</sup>?

#### Undergraduate Students

- \* Resident undergraduate tuition and fee charges averaged \$3,108 at NASULGC institutions in fall 1996 (see Table 3). This figure is a 4 percent increase (\$123) over the 1995 average of \$2,985. (Institutional data for NASULGC members are listed in Appendix B.)
- \* 1996 nonresident undergraduate tuition and fee charges averaged \$9,081, which was about a 5 percent increase (\$464) above the 1995 figure of \$8,617.
- \* In 1996, average undergraduate room and board charges were \$4,350. This figure was 5 percent higher (\$206) than the 1995 comparable figure of \$4,144.

#### Postbaccalaureate Students

- \* Resident tuition and fee charges for students enrolled at the master's level averaged \$3,610 at NASULGC institutions in fall 1996. This was a 5 percent increase (\$175) over the 1995 average of \$3,435. Doctoral students averaged tuition and fee rates of \$4,057 which was a 5.5 percent increase (\$211) over the 1995 figure of \$3,846.
- \* Among nonresident master's students, the 1996 average tuition and fee charges were \$9,038, a 5 percent increase (\$456) over the 1995 figure of \$8,582. Nonresident students enrolled in doctoral programs averaged \$9,938 for tuition and fees; this was about 6 percent higher (\$599) than the 1995 figure of \$9,339.

<sup>&</sup>lt;sup>3</sup>See footnote 1.

#### What Do These Increases Mean?

- \* It is encouraging that the current rate of increase in undergraduate tuition and fee rates for public, four-year institutions (5.5 percent) is lower than rates in the past several years (see Figure 1). The CPI annual inflation rate has remained stable since 1991, averaging 3 percent or slightly less. During this same period, average tuition and fee rates of increase gradually dropped from 12 percent to about 6 percent. Noninstructional costs (room, board, books, supplies, and personal expenses) historically have risen at rates that were closer to the general rate of inflation.
- \* 1995 and 1996 state college and university tuition and fee averages for resident undergraduate students appear in Table 4. There are substantial differences in the rates and percentage changes across states. One important factor is that the economic resources available in one state may be very different from those of even an adjoining state. In addition, advocates in support of public colleges and universities face stiff competition for state funds with competing demands for prisons, Medicaid, elementary and secondary education systems, transportation, and other public services. The Justice Policy Group released a study that said state governments increased spending on prison construction by 30 percent from 1987 to 1995 but reduced spending for higher education construction by 18 percent over the same period.
- \* The most recent data show that the rate of increase in tuition and fees is slowing across states. In 1996 only 5 states had double-digit increases in average tuition and fee rates for resident undergraduate students. Just four years ago, there were 18 states with 10 percent or higher rates of increase. In addition, in 1996 10 states experienced increases that were below the CPI rate of inflation (3 percent).

#### Have State Appropriations Kept Up With the Cost of Education?

- \* Traditionally, investment in public higher education has been viewed as important to the interests of the nation, the state, and the individual. This investment has always been a shared responsibility. However, in the past several decades, there has been an erosion in the level of support from public tax dollars.
- \* The two largest sources of support for public universities and colleges have been state appropriations and tuition and fees. Different types of public, four-year institutions depend on state appropriations to varying degrees. In 1993-94, the range for state appropriations was 29-47 percent of total funding (see Figure 2). The proportion coming from tuition and fees also varied across institutional types from 15-31 percent in 1993-94.
- \* State appropriations to public universities have not kept pace with the increasing cost of higher education goods and services. In current dollars, the national average for state appropriations per FTE student increased 106 percent between FY 80 and FY 96. However, after adjusting for inflation, state appropriations per FTE actually declined almost 8 percent during this period (see Figure 3). Without sustained support from state governments, policymakers have had to rely on increases in tuition and fee revenues to support institutional operating budgets.

#### Is There Still An Economic Benefit to Higher Education?

\* A number of public policy trends are threatening existing levels of access.

<sup>&</sup>lt;sup>4</sup> Figures were adjusted using the Higher Education Price Index (HEPI).

Rising tuition, the substitution of loans for grants to finance education, and decreasing levels of budgetary support for state colleges and universities endanger the affordability of campus-based public higher education for all students. This shift from funding education for the public good to making funding decisions based on individual benefit is unwise. Our nation's economic future, our national security, and the education of our people are interwoven.

\* Young people have many options after high school: working full-time, entering the military, enrolling full-time in college or vocational training, or combining education and work. The long-term economic advantages of higher education are well documented. Figure 4 illustrates that, as adults acquire increasing levels of higher education, their average annual income rises. Among men, the 1994 median income of high school graduates who were employed full-time and 25 years or older was \$28,037. Their peers who had completed at least a college degree were earning average incomes of \$43,663. Further participation at the graduate or professional level also was beneficial because those graduates enjoyed average incomes of \$53,500 - \$75,009. Among women, the figures for those with varying levels of education were: \$20,373 for high school graduates; \$31,741 for college graduates; and a range of \$39,457 - \$51,119 for those who had completed graduate or professional degrees.

# **How Are Families Meeting College Costs?**

1

\* Tuition at public colleges and universities is not as steep as the public believes it to be. Most students face a posted price of less than \$3,000 a year in college tuition and fees, and 50 percent of college students in public colleges and universities get some student aid.

- \* Unfortunately, the median incomes of families have not kept pace with rising college costs in the 1990s. Salaries have been stagnant, and, in many families, there are no "second wage earners" left to add to family earnings. Median family incomes grew at rates which were less than 3 percent per year from 1991 to 1993. The 1994 figure of \$38,782 is encouraging because this reflects a one-year increase of 5 percent.
- \* Use of financial assistance is widespread. The College Board reports that total student aid in 1996-97 was \$50.3 billion. Almost 3 out of every 4 dollars originated from the federal government (74 percent) with the remaining funds supplied from state (6 percent) or institutional/private sources (20 percent).
- \* The federal share of the investment in student aid is shrinking while the role played by institutions is expanding (see Figure 5). Between 1985-86 and 1995-96, the federal government's share fell from 79 percent to 74 percent while the proportion supplied by institutional sources increased from 15 percent to 20 percent. The state government's share remained constant at 6 percent during this period.
- \* Currently about half of the undergraduates at public institutions are using some form of student aid. Among undergraduates who received aid at public, four-year colleges and universities in 1995-96, the most popular types were subsidized Stafford loans (used by 70 percent and averaging \$3,441 per student) and Pell grants (used by 51 percent and averaging \$1,750 per student) (see Table 5). Among graduate and first-professional students, Stafford loans were again the most popular form of aid used (see Table 6). Over 90 percent of the postbaccalaureate students who received aid were using Stafford subsidized loans and at least half also had borrowed a Stafford unsubsidized loan. Graduate and first-professional students at

public, four-year institutions who had used Stafford loans in 1995-96 had borrowed an average of \$4,327-\$7,629. (This range reflects the fact that some fields of study are more expensive than others.)

- \* The type of financial aid clearly has shifted in the past 10 years. By 1995-96, grants represented 42 percent of total federal, state and institutional aid; the proportion in 1985-86 had been 48 percent (see Figure 6). Not surprisingly, the rise in loan usage is easy to document. Loans provided 49 percent of the aid in 1985-86 and they constituted 57 percent by 1994. The proportion of aid in the form of work-study funding fell from 3 percent to 1 percent during this time.
- \* The shift in federal policy from grants to loans is forcing many students to graduate in debt and is mortgaging their future. A recent study, "College Debt and The American Family," documented that borrowing for college has grown at a rate three times the growth of college costs and four times the growth of personal income. At AASCU member institutions, the average cumulative debt burden for graduates is \$10,000 \$12,000; students finishing a baccalaureate degree at NASULGC institutions might incur even higher debts.
- \* Many students combine enrollment with employment to help offset college costs. For example, in 1993, 46 percent of all full-time and 84 percent of part-time college students were working while they were enrolled. However, because college costs have risen so rapidly, if a student were to finance a college education exclusively from earnings, a full-time student at an average priced public, four-year institution would have to work 44 hours per week at the minimum wage. Ten years ago, the comparable figure was 28 hours.

\* Studies have shown that students who work long hours every week may drop out of school at higher rates than those who work a few hours per week.

Even among full-time college students, the percentage who are working 20 hours a week or more is increasing. Between 1973 and 1993, the proportion increased from 17 percent to 25 percent.

#### Are There Reasons for the Increase in Tuition?

- \* There are three main reasons for tuition increases:
  - --to offset the cost of lost state subsidies,
  - --to finance technology costs, and
  - --to pay for increasing health care costs for employees.
- \* Few members of the public understand the "discretionary" nature of state funding for higher education. There is no mandatory matching requirement for funding higher education as there is for federal Medicaid funds nor is there a minimum annual funding level set by states.
- \* State appropriations to higher education, adjusted for inflation and for full-time enrollment, have decreased steadily since 1990. The loss in state appropriations going to students in the past 15 years means that students receive \$500 less in state appropriations today than they received in 1980. At the same time, enrollments have climbed steadily, an obvious productivity increase.
- \* Overall, institutions of higher education have lost approximately \$7.7 billion in purchasing power adjusted for inflation and funding cuts affecting programs and services since 1990.

- \* Universities make up decreased state appropriations through a variety of means, one of which is to increase tuition.
- \* Academic support expenditures for all public, four-year institutions have increased 132 percent from 1989 to 1994, and student services expenditures increased a total of 135 percent during that same period.
- \* Evening and weekend classes, expanded counseling services, career placement services, and the increased use of and support for technology have strained already taxed campus budgets.

#### What Are Colleges and Universities Doing To Keep Costs Down?

College and university presidents and chancellors continue to be concerned when tuition rises, despite their best efforts. For example:

- \* The University of Rhode Island suspended admissions to 19 undergraduate and 29 graduate programs with low enrollment or high costs.
- \* When more space was needed to serve California's ballooning college-age population, instead of building new campuses, California State University took over a closed Army base at Monterey Bay.
- \* The University of Southern Colorado shares fiscal plant facilities, equipment, and maintenance staff with the local school system, and the University of Maine shares libraries with Colby and Bates Colleges.
- \* By reducing the time it takes for a student to graduate, some institutions make room for new students by encouraging current students to get on with

their studies. California has legislated a duplicate degree charge assessed on students enrolled for a second degree at the same time or lower level than their first degree. North Carolina undergraduates will be assessed a 25 percent tuition surcharge if they take more than 140 credits (110 percent) to complete a baccalaureate degree.

\* Incoming freshmen to the University of Iowa, Iowa State University, or the University of Northern Iowa are guaranteed that they can graduate in four years or the extra tuition is paid by the school.

Source: The College Board Annual Survey, 1995-96 and 1996-97. A set of institutions was selected that reported consistently for these two years. Average tuition and fee charges were weighted by full-time enrollment. This procedure follows the methodology used by The College Board.

17

Table 5 Characteristics of Full-Time Undergraduates Who Received Student Aid and Attended Public, Four-Year Institutions in 1995-96

Type of Aid Received	Percentage of Aided Students Using This Program	Average Amount Received
Pell Grant	50.6%	\$1,750
SEOG	13.5	766
Federal Work-Study	11.1	1,353
Perkins Loan	13.5	1,459
Stafford Loans		·
Unsubsidized	33.8	3,135
Subsidized	69.8	3,441
PLUS Loan	9.5	5,449
Total State Aid	36.4	1,850
Total Institutional Grant	19.1	2,139
